CGI Cyber Escape

People are the first line of defence to keep your organisation safe from cyber attack - but are they up to the challenge?

Escape room-style cyber security training

Participating in physical cyber awareness training allows individuals and teams to experience how to keep information and assets safe in real world scenarios. CGI Cyber Escape will help contextualise best practices in a fun and safe environment, enhancing your organisation's cyber resilience

Topics covered in the CGI Cyber Escape include:

- IT Security
- Phishing email attempts
- Document handling
- Device handling
- Physical security
- Document disposal and destruction
- Social engineering
- Firewalls

It can be hosted at your site

- Teams work together to discover clues, solve puzzles, and accomplish cyber related tasks to progress and “escape” within the time allowed.
- The sessions run for 30 or 60-minute sessions with teams of 4 to 6 people at a time.
- Tailored sessions according to age / experience
- **CGI Cyber Escape is touring Australia and is available for booking.** The mobility of the container means it can be brought to your site – or bring your team to a communal site.

“It was excellent. Everyone enjoyed it even though two teams (including mine) didn’t get out in time. I’ve done a few **corporate escape or puzzle rooms** before, but **none of them have been as good as this one.**”

It was really well designed and built. The **team running** it were very **friendly and helpful.**“

Anthony Smith, IS Security Manager
